1 Introduction

1.1 Scope

The purpose of this document is to provide a technical description of the data files that can be generated from a BME CLEARING terminal with clearing functions.

This information will be provided in plain files, with their definition provided later in this document.

1.2 Structure of document

The first chapter contains general information about this document, including technical details on the format of files, the nature of the record delimiters, etc.

The remaining chapters define the files, grouping them functionally.

- General data: characteristics of the Clearing House and the contracts.
- Daily data information: public clearing related data.
- Private configuration data: characteristics of the configuration of accounts (position accounts, margin accounts and collateral accounts) and Give-Up references of a member.
- Data for margin calculation: parameters of the algorithms for calculation and offsetting of margins, and valuations of prices and deltas.
- Data for margin calculation – scenario model: parameters of the algorithms for calculation of margins in the scenario model.
- Trades: detail of daily trades the previous session trades suitable to be transferred.
- Trade Management: assignments, transfers or Give-Ups.
- Open position: status of the position and adjustments made to it.
- Exercise – Expiration: exercise requests and possible delivery of stocks.
- Margin Pledged: data on the collateral pledged.
- Fees: data on the fee amounts and calculations.
- Results at Position Account level: data related to option premiums, valuation of futures, forwards and swaps.
- Results at the Margin Account level: data on the margins required and posted, as well as option premiums, fees and valuation of futures, forwards and swaps.
- Results at Collateral Account level: data related to margins required and posted.
- Results at the Second-Tier Register level: data at Position Account level on the margins required and pledged, as well as the trading, option premiums, valuation of futures and fees, and possible delivery of stocks.

- Results for Clearing Members: data at clearing member level on the margins required and pledged. Final data on cash movements and invoicing.
- Results for Payment Agents: files on the settlement cash movements for the treasury entity.

1.3 Conventions used in this document

1.3.1 Definition of files

For each file described in this document a table is included presenting the generic information of the file with the following format:

	(1)
Group	(2)
Description	(3)
Destinations	(4)
Privacy	(5)
Timing	(6)

(1) File name just as it is generated. All files have as extension the code of their corresponding environment (generically, "ch").
(2) Group that the file belongs to
(3) Description of the file
(4) Destinations of the file
(5) Indicates whether the file contains public or private data
(6) Indicates the time when the file is available, when its contents change and the method of updating the records

1.3.2 Flat file definitions

Flat file descriptions include another table describing the format and content of the fields that make up each of the records of the file.

#	*	FIELD	TYPE	VALID VALUES	DESCRIPTION
(1)	(2)	(3)	(4)	(5)	(6)

(1) – Number of field in the record. When it includes an "N" the field contains the number of times that the immediately following fields are repeated, in which an "R" is displayed in this column.
(2) - Contains "□" when the field forms part of the file key
(3) – Name of the field
(4) – Type of field as described in the section 1.3.4
(5) – Valid values or range of values
(6) – Description of the field

All the fields are separated by the semi-colon character (";").

All the records of each of the files are separated by the characters CR, LF.

1.3.3 XML file definitions

For XML files, the URL for XSD schema is provided as well as the version number applying. In addition, a table describing the format and content of the elements is included.

#	ELEMENT	VALID VALUES	DESCRIPTION
(1)	(2)	(3)	(4)

(1) Number of element in the definition table. For readability reasons multilevel numbering is used (e.g.: 1, 1.1, 1.2, 2, 3, 3.1, 3.2, 3.2.1, 3.2.2 ...). In the file the order of elements at the same level is not predetermined, since they are identified by the element name in the corresponding tag.
(2) Name of the field
(3) Valid values or range of values
(4) Description of the field

1.3.4 Data types

This section summarises the distinct types of data used in the description of each of the files.

These types of data correspond with ASCII values and all are of variable length. These are:

- **int:** Sequence of digits without separators for thousands or decimals and optionally with sign (ASCII characters "**-**" and "**0**" – "**9**"). The sign character uses one byte (that is, int is " **99999**" whereas negative int is "**-99999**"). Note that int values can represent figures that begin with zeros (that is "**00023**" = "**23**").

- **float:** Sequence of digits, optionally with decimal comma and sign (ASCII characters "**-**" , "**0**" – "**9** and "**,**"); the absence of the decimal comma in the value of the field should be interpreted as the "float" representation of a whole value. All the float fields will have a maximum of **fifteen significant digits (the sign and the decimal comma are not counted)**. The number of decimals used will be a factor of the requirements of the trade. Note that the float values can represent figures that begin with zeros (that is "**00023**" = "**23**") and can contain or omit zeros at the end after the decimal comma (that is "**23,0**" = "**23,0000**" = "**23**").
  - **Qty:** Float field able to store a complete number (without decimals) of "contracts".
  - **Price:** Float field that represents a price. Note that the number of decimals may vary.
  - **Amt:** Float field that represents an amount. Note that the number of decimals may vary.

- **char:** field of a single character. It can contain any alphanumeric character or punctuation character except the delimiter. All the char fields are case sensitive (that is, **m** ≠ **M**) and are delimited by punctuation marks (**'**).

- **String:** Chain of alphanumeric characters. Can include any alphanumeric character or punctuation character except the delimiter. All the String fields are case sensitive (that is, **ref** ≠ **Ref**) and are delimited by punctuation marks (**"**). The annotation "String(n)" is used to indicate the maximum number of characters in the String field. In some cases, "n" implies the exact number of characters and, in this case it will be specified clearly under the column "Valid values".
  - **Currency:** String field that represents a currency using the values defined in the standard ISO 4217 Currency code (3 characters).
    See "Table 1 – Currency codes" in document 'Codification Tables'.
  - **LocalDate:** Local date in YYYYMMDD format.
    Valid values: YYYY = 0000-9999, MM = 01-12, DD = 01-31.

- **LocalTime:** Local time of file generation in HH:MM:SS format
  Valid values: HH = 00-23, MM = 00-59, SS = 00-59

- **LongLocalTime:** Local time of file generation in HH:MM:SS.XXXXXX format
  Valid values: HH = 00-23, MM = 00-59, SS = 00-59, XXXXXX=000000-999999

1.4 Future versions of this document

1.4.1 New fields

Any new field will always be included at the end of the file affected, so that it has the least possible effect on those systems that have been developed taking the files included in this document as reference.

1.4.2 Fields deleted

Any field that is no longer available in a file will be replaced by a 'FILLER' field without content, which will facilitate compatibility between the previous version and the new version. In each case, the validity of compatibility between versions will be specified.

1.4.3 New files

This document can be modified in the future to include new files.

1.4.4 Highlighting changes

All changes will be shown shaded in grey. The text eliminated from the previous version will be shown using the crossed out font and shaded in grey.

2 General Data

This group contains files of a public nature that define the characteristics of the Clearing House and its contracts.

2.1 Clearing environment

CCLEARINGHOUSE.ch	
Group	General Data
Description	Generic information about the Clearing House
Destinations	All the users of the Clearing House
Privacy	Contains public data
Timing	Available from start of the session. Static, does not vary throughout the session.

3	🗝	ContractCode	String(2)		Contract code
4		UnderlyingISINCode	String(12)		ISIN underlying code
5		UnderlyingDescription			Description of the underlying
6		UnderlyingContractGroup			Contract Group code in which the asset is listed
7		CFICode	String(6)		Codification of financial instruments in accordance with ISO standard 10962.
8		AssetType	String(3)	see Table 2 in document 'Codification Tables'	Asset class
9		Currency	Currency	see Table 1 in document 'Codification Tables'	Asset currency code
10		ExpiryDate	LocalDate		Expiry date for asset
11		LastAuctionDate	LocalDate		Last auction date for the asset
12		StartCouponDate	LocalDate		Date on which the asset starts to accrue coupon. Only for bonds
13		CouponNo	int	> 0 and <= 12	Number of annual coupons. Only for bonds
14		Coupon	float		Coupon as percentage of nominal. Only for bonds
15		CalcMethod	Char	1 = Real base	Accrued interest calculation method, depending on the way of estimating the number of days between the coupon dates. Only for bonds Real base: Considers the actual number of days between the coupon dates

2.12 Resulting codes for the theoretical cascade

CCONTRREL.ch	
Group	General Data
Description	Relationship between the original contract and its resulting contracts, in the case where in the group of contracts there are contracts whose position should be broken down into others of a lower nominal amount. For Energy this informs about the position which results from applying the theoretical cascade.
Destinations	All the users of the Clearing House
Privacy	Contains public data
Timing	Available from start of the session. Static, does not vary throughout the session.

#	*	FIELD	TYPE	VALID VALUES	DESCRIPTION
1	🗝	SessionDate	LocalDate		Session date
2	🗝	ContractGroup	String(2)		Contract Group code
3	🗝	ContractCode	String(22)		Contract code
4		NumberOfRelatedContracts	Int		Number of related contracts that are defined as follows. Maximum 31.
5.1		RelatedContractCode	String(22)		Code of resulting contract
5.2		ContractInitialDate	LocalDate		Date of initial contract.. In Energy it is the initial date of the delivery period of the resulting contract.
5.3		ContractFinalDate	LocalDate		Final date of contract. In Energy, it is the final date of the delivery period of the resulting contract..

2.13 Detail of resulting codes for the cascade

CCONTRRELDET.ch

2	🗝	ContractGroup	String(2)		Contract Group code
3	🗝	Stock	String(22)		Stock code in cash market
4N		NumberOfDividends	int		Number of dividends contained in record. It will be followed by three fields as described below for each dividend
5R		DividendDate	LocalDate		Dividend date
6R		DividendAmount	Amt		Dividend amount
7R		DividendConfirmedIndicator	char	"1"=Yes "0"=No	Indicates whether dividend confirmed or not

5.10 Skew of volatilities

CVOLATILITYSKEW.ch	
Group	Margin Calculation Data
Description	Volatility curve used for theoretical price calculations
Destinations	All the users of the Clearing House
Privacy	Contains public data
Timing	Available from the start of the session. Dynamic, records can be added, modified or eliminated at any time.

#	*	FIELD	TYPE	VALID VALUES	DESCRIPTION
1	🗝	SessionDate	LocalDate		Session date
2	🗝	ContractGroup	String(2)		Contract Group code
3	🗝	Underlying	String(22)		Stock code in cash market
4	🗝	MaturityDate	LocalDate		Maturity date
5	🗝	InstrumentType	char	"C"=Call "P"=Put "?"=All (Call and Put)	Indicator of whether the record refers to call options, put options, or both
6		VolatilityATM	float		Volatility At The Money. Expressed as percentage.
7		Divisor	int		Divisor of percentage points. Indicates at what percentage the increase of volatility is applied
8		MinimumVolatility	float		Minimum volatility. Expressed as percentage.
9		MaximumVolatility	float		Maximum volatility. Expressed as percentage.
10N		NumberOfRanges	int	<=8	Number of ranges that this record contains. It will be followed by four fields as described below for each range
11R		VariationPercentage1	float		Percentage change for strike price >= underlying price. It is expressed as a percentage of the reference price and is accumulative. For example, if it is 10% for the first tranche and 15% for the second tranche, this means that it is 10+15 % of the reference price. Expressed as a percentage.
12R		VariationPoints1	float		Percentage increase / decrease for the strike price >= underlying price
13R		VariationPercentage2	float		Percentage change for strike price < underlying price. It is expressed as a percentage of the reference price and is accumulative. For example, if it is 10% for the first tranche and 15% for the second tranche, this means that it is 10+15 %

#	*	FIELD	TYPE	VALID VALUES	DESCRIPTION

#	*	FIELD	TYPE	VALID VALUES	DESCRIPTION
1	🗝	SessionDate	LocalDate		Session date
2	🗝	ContractGroup	String(2)		Contract group code
3		MporHouse	Int		Number of days - Mpor House
4		MporClient	Int		Number of days - Mpor Client
5		HvarCI	float	Percentage, expressed in parts per one: 5% equals 0.05 (with 4 decimal places). Should correspond to the 25th worst-case scenario	Confidence level HVAR
6		EsCI	float	Percentage, expressed in parts per one: 5% equals 0.05 (with 4 decimal places). Should correspond to the average of the 18th worst scenarios.	Confidence level ES
7		LookBackPeriod	Int		The number of historical scenarios used to calculate the IM. The same number will be applied for HVaR and ES. In principal, 2520.
8		NonScaledScenariosNumberFV	Int		Number of non-scaled scenarios for a full valuation. (Do not apply for FX RSF)
9		ScaledScenariosNumberFV	Int		Number of scaled scenarios for a full valuation. (Do not apply for FX RSF)
10		IMbaseBuffer	float		Base IM multiplier factor
11		IMFloorFactor	Float	Percentage, expressed in parts per one: 20% equals 0.20	Base IM multiplier factor to obtain the Initial Margin floor

#	*	FIELD	TYPE	VALID VALUES	DESCRIPTION
				(with 4 decimal places)	
12		Currency	Currency	See table 1 of the "Codification Tables" document.	Currency of following risk data or "Margin Calculation Currency"
13		DaysSmoothingParam	Int		N (DaySmoothingParam) corresponds to the value computed in the smoothing parameter defined as 2/(N+1). The default value is set to 10.

6.2 Parameters information corresponding to the adjustment of the position size

CLIQUIDITYMARGIN.ch	
Group	Margin calculation data – scenario model
Description	Parameters information corresponding to the adjustment of the position size, for each currency pair under normal and stressed market conditions. (scenario model)
Destinations	All the users of the Clearing House
Privacy	Contains public data
Timing	Available from start of the session. Static, does not vary throughout the session.

#	*	FIELD	TYPE	VALID VALUES	DESCRIPTION

3	🗝	ContractSubgroupCode	String(2)	see table 13 of the "Codification Tables" document or content of CCONTRGRP.ch file.	Contract subgroup code
4		ContractSubgroupDescription	String(20)	see table 14 of the "Codification Tables" document	Description of the contract subgroup
5		QuantityMax	Int		Maximum market volume
6N		NumberOfIntervals	Int		Number of intervals that are defined as follows. Maximum 10.
7R		QuantityInterval	Int		The value of this field by QuantityMax marks the border with the following maximum market volume tranche (usually 5 intervals)
8R		Surcharge	float		Illiquidity surcharge expressed in quote Currency

6.3 Risk factor buffer and decay factor

CIMFACTORS.ch	
Group	Margin calculation data – scenario model
Description	Information on the applicable sovereign risk factor and decay factor for each currency pair. (scenario model)
Destinations	All the users of the Clearing House
Privacy	Contains public data
Timing	Available from start of the session. Static, does not vary throughout the session.
